Abstracts

The catering industry needs streamlined business operations to boost product demand. Hence, restaurateurs have deployed point of sales systems to operate with improved efficiency by reducing billing time, monitoring the order completion time, and avoid order error during peak hours. A POS system strives to manage the back-end preparation for a smooth front-end operation during busy hours. The restaurant POS terminal functions involve billing, recording sales figures, payroll management, and inventory control to ensure business function. Everyday sales and inventory data recorded in the POS system are analyzed to track the sales pattern and help restaurateurs manage sales tax reporting as well as track their monthly and annual sales. Hence, the installation of fixed POS systems can reduce everyday tedious and manual tasks recording sales and preparing tax reports. Additionally, integration of Customer Relationship Management (CRM) software in the POS system automatically fetches customer information to create regular updates and prepare sales reports.
