## Abstracts

According to our (Global Info Research) latest study, the global Fixed Dental Radiography System market size was valued at USD 2050.7 million in 2022 and is forecast to a readjusted size of USD 3249 million by 2029 with a CAGR of 6.8% during review period.

The development trend of fixed dental radiography systems is focused on improving image quality, reducing radiation exposure, increasing efficiency, and enhancing patient comfort. The shift from traditional film-based radiography to digital radiography has been a significant trend. Digital systems offer higher image resolution, immediate image availability, and the ability to enhance and manipulate images for better diagnosis. CBCT technology has gained popularity in recent years due to its ability to provide three-dimensional images of the oral and maxillofacial region. This technology allows for more accurate diagnosis and treatment planning, especially for complex cases such as dental implants and orthodontics. Manufacturers are continuously working on developing systems that emit lower levels of radiation while maintaining image quality. This is achieved through advancements in sensor technology, image processing algorithms, and optimized exposure settings.
