The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Fixed-focal-length lenses, are great for creating bokeh as well as taking pictures with minimal camera shake. Prime lenses are also known as single focus lenses or fixed focus lenses. As those names suggest, they have only one focal length, so it is not possible to zoom in or out to change your angle of view. However, they also tend to be bright and come with a wide maximum aperture (small f-number), which makes it easy to create a good bokeh effect in the background. They also let you achieve a faster shutter speed when you shoot in low light conditions, so that you can obtain a clear image without having to use a high ISO speed and risking the occurrence of noise in order to prevent camera shake.
