Abstracts

The global Fixed Hyperbaric Oxygen Therapy Chamber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fixed hyperbaric oxygen therapy chamber is a medical device used to deliver high concentration of oxygen to treat various diseases or trauma. Compared with the inflatable hyperbaric oxygen chamber, the fixed hyperbaric oxygen chamber is usually a fixed, large airtight chamber that can accommodate multiple patients for treatment at the same time. The working principle of the fixed hyperbaric oxygen chamber is similar to that of the inflatable hyperbaric oxygen chamber. It provides a high-pressure oxygen environment to allow the human body to inhale a higher concentration of oxygen, thereby promoting wound healing, relieving pain, treating burn injuries, radiation damage, poisoning, etc. disease. Stationary hyperbaric oxygen chambers typically include a pressure control system, an oxygen supply system, and an air circulation system. After the patient enters the cabin, the system will gradually increase the internal oxygen concentration and air pressure to reach the high oxygen pressure environment required for treatment.
