## Abstracts

The global Fixed Medical Pendant market size is expected to reach \$ 326 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

A fixed medical pendant is an integrated medical device suspended in a fixed position from the ceiling. It has no rotation or movement function and uses a cantilever structure to support medical gas terminals, power outlets, and instrument platforms. It centrally suspends and manages equipment such as monitors and ventilators, with pipelines running from the top, providing a stable gas and power supply and operating space for ICUs and operating rooms.

The upstream industry mainly includes suppliers of core components such as medical gas terminals, aluminum alloy profiles, electrical control systems, precision machined parts, and bearings. The downstream industry covers end-users such as intensive care units, emergency rooms, and general wards in hospitals at all levels, achieving application through medical equipment bidding and procurement, cleanroom engineering support, and distributor distribution. The global unit price of fixed medical pendant is US\$11,788, with annual sales of approximately 19,800 units, global production capacity of 30,000 units, and an industry profit margin of 20%.

The global fixed medical pendant market is entering a period of stable development characterized by structural optimization and functional upgrades. Technologically, products are evolving towards modular designs, allowing hospitals to flexibly configure the number of gas terminals and instrument platform layers according to clinical needs, improving space utilization. In application areas, with the increasing prevalence of intensive care units and the growing demand for ward renovations, fixed pendant towers maintain stable demand in general wards and emergency rooms due to their structural

stability and controllable costs. Dry and wet separation designs are gradually gaining traction, effectively improving infection control levels. In regional markets, the Asia-Pacific region has become the sector with the greatest growth potential due to expanded investment in medical infrastructure and an accelerating aging population. Local companies are continuously expanding their market share in the process of domestic substitution, leveraging their cost-effectiveness advantages.
