A fish finder is an instrument used to locate fish underwater by detecting reflected pulses of sound energy, as in sonar. Fixed type fish finders can be attached to the fishing boat permanently. It offers a better display in comparison with any portable model.

Fixed mount fish finders offer a more permanent installation but may require professional installation or drilling into your boat. A modern fishfinder displays measurements of reflected sound on a graphical display, allowing an operator to interpret information to locate schools of fish, underwater debris, and the bottom of body of water. Fishfinder instruments are used both by sport and commercial fishermen. Modern electronics allows a high degree of integration between the fishfinder system, marine radar, compass and GPS navigation systems.
