Abstracts

The global Fixed Mount Scanner market size is expected to reach \$ 1586 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032). A Fixed Mount Scanner is a barcode-reading device designed to operate in a stationary, mounted position (e.g., countertop, embedded POS checkstand, kiosk, wall/bracket mount, machine integration, or conveyor line). It typically performs hands-free or auto-triggered scanning of 1D and/or 2D barcodes when an item is presented to or passes through its scan window/field of view. The defining feature is that the scanner stays fixed while the object moves into the reading zone, making it widely used in retail checkout, front-desk verification, self-service kiosks, logistics sorting, and industrial automation.

In 2025, global Fixed Mount Scanner sales reached approximately 13,431 k units, with an average global market price of around US\$ 81.6 per unit. The single-line production capacity is about 100,000 units, and the industry gross profit margin is about 40%. The global Fixed Mount Scanner market is on a solid growth path, driven by two major forces: (1) retail checkout upgrades as GS1's Sunrise 2027 accelerates the move from 1D to 1D+2D at POS (retailers are expected to have scanners capable of reading 2D codes by end-2027), triggering refresh cycles for bioptic/presentation fixed scanners; and (2) automation and traceability in logistics and manufacturing, where fixed-mount readers are increasingly deployed inline on conveyors and production lines. At the same time, self-checkout is evolving rather than disappearing?retailers are tightening controls with item limits, hybrid/assisted models, and AI-driven loss prevention in response to shrink.
