Abstracts

According to our (Global Info Research) latest study, the global Fixed-Point Explosion-Proof Thermal Imager market size was valued at US\$ 279 million in 2025 and is forecast to a readjusted size of US\$ 423 million by 2032 with a CAGR of 6.1% during review period.

A fixed-point explosion-proof thermal imager is a temperature monitoring device used in hazardous environments, specifically designed to prevent explosions or fires. This instrument uses infrared imaging technology to monitor temperature changes in equipment, pipelines, or areas in real time, making it particularly suitable for industrial sites containing flammable and explosive gases, chemicals, or dust. Fixed-point explosion-proof thermal imagers are typically installed at the monitoring point and feature high precision, high temperature resistance, and explosion-proof characteristics. They are widely used in high-risk industries such as petroleum, natural gas, chemicals, and mining to ensure safe production and prevent accidents.

The upstream of the fixed-point explosion-proof thermal imager industry chain mainly includes core component and material suppliers, such as infrared detectors (uncooled or cooled), lenses and optical materials, signal processing chips, high-temperature and corrosion-resistant housing materials, and explosion-proof structural components. The midstream consists of fixed-point explosion-proof thermal imager system integrators and manufacturers, responsible for the integration of infrared detection modules and image processing units, explosion-proof housing design, temperature control, and communication interface development. This is the core link of the industry chain, with high technical barriers and gross profit margins typically between 35% and 55%. Downstream applications cover high-risk environments such as petrochemicals, coal

mines, power, metallurgy, hazardous materials storage and transportation, and industrial automation, mainly used for fire source monitoring, equipment safety monitoring, and risk early warning, providing users with continuous and reliable temperature monitoring and safety protection.

In 2025, the average price of a fixed-point explosion-proof thermal imager was US\$6,510 per unit, with sales of 41,628 units.

Fixed-point explosion-proof thermal imagers play a key role in modern industrial safety management, especially in high-risk industries such as oil, gas, and chemicals. They effectively prevent potential fire and explosion accidents by monitoring temperature changes in real time, greatly improving operational safety in dangerous environments. Compared with traditional detection methods, explosion-proof thermal imagers not only have the advantages of non-contact monitoring, but also can provide accurate temperature data around the clock and fully automatically, reducing the risks and errors of manual inspections. Therefore, it is not only an important tool for ensuring industrial safety, but also a key equipment for improving production efficiency and reducing accident losses.
