The global Fixed Radiography Systems market size is expected to reach \$ 1266.3 million by 2029, rising at a market growth of 5.0% CAGR during the forecast period (2023-2029).

Fixed radiography systems are medical imaging systems used to produce diagnostic images of the human body using X-rays. These systems consist of an X-ray tube mounted on a fixed stand or wall-mounted unit, a detector, and a computer workstation for image processing and analysis. The X-ray tube produces a controlled amount of radiation, which passes through the patient's body and is detected by the detector, creating a digital image that can be displayed on the computer workstation.
