According to our (Global Info Research) latest study, the global Fixed Residual Current Devices market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Residual Current Devices help protect people and equipment against electrical shocks caused by indirect contact. RCDs work together with Miniature Circuit Breakers (MCB) or fuses, covering the whole system against potentially damaging thermal and dynamic stresses of any overcurrent. Fixed RCDs provide the highest level of protection and are installed in the fusebox. They're designed to provide protection for groups of circuits or individual units. A fixed RCD will protect all of the sockets and wiring on a circuit and all the connected appliances to that circuit.
