According to our (Global Info Research) latest study, the global Fixed Water Quality Automatic Monitoring Station market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The fixed water quality automatic monitoring station is an automated device used to continuously monitor water quality. The monitoring station integrates a variety of sensors and automated devices, and can monitor water quality parameters such as pH, dissolved oxygen, conductivity, temperature, turbidity, chemical oxygen demand (COD), ammonia nitrogen, total phosphorus, total nitrogen, etc. in real time. The data is transmitted to the remote monitoring center by wireless or wired means and is used in the fields of environmental protection, water resources management, industrial emission monitoring, etc. The fixed water quality monitoring station has the characteristics of high precision, automation, low maintenance and remote control. It can operate stably for a long time in complex environments and provide accurate and real-time data support for water quality monitoring. This equipment plays an important role in environmental protection, emergency monitoring, protection of drinking water sources, industrial emission supervision, etc., and helps to timely discover and deal with water pollution problems and ensure water health and ecological safety.
