Fixed wiring cables are electrical cables that are used for permanent installation in buildings and structures. These cables are designed to provide a reliable and safe electrical connection for various applications.

Fixed wiring cables typically consist of copper or aluminum conductors, which carry the electrical current, and an insulation material to provide electrical insulation between the conductors. The insulation can be made of materials such as PVC (polyvinyl chloride) or XLPE (cross-linked polyethylene), depending on the specific requirements and regulations of the installation. Fixed wiring cables are essential for providing a safe and reliable electrical infrastructure in buildings. They are installed in a fixed position within conduit systems, cable trays, or embedded directly into walls, ceilings, or floors, ensuring a permanent and secure electrical connection. It is important to follow local electrical codes and regulations when selecting and installing fixed wiring cables to ensure compliance and safety.
