Abstracts

The global Flame Retardant Cotton Fiber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cotton is not fire retardant when it is not treated. However, cotton can be made flame-resistant by chemical applications of polymeric, nonpolymeric, and polymeric/nonpolymeric hybrids that are composed of one or more of the elements such as nitrogen, sodium, phosphorus, silicon, boron, or chlorine. The treated cotton has some chemicals in it that make it fire retardant. Wash-durable flame retardant cotton in industry is produced by treating the fabric with flame retardants, which chemically links to the cellulose in the cotton.

This report studies the global Flame Retardant Cotton Fiber production, demand, key manufacturers, and key regions.
