## Abstracts

The global Flame-Retardant Non-Woven Fabric Seat Covers market size is expected to reach \$ 416 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Flame-retardant nonwoven seat covers are protective seat covers made from polypropylene (PP), polyester (PET), or SMS composite nonwoven fabric as the base material, with added flame retardants (such as phosphorus, nitrogen, or halogen-based flame retardants). Their main function is to cover the seat surface, preventing contamination from dust, liquids, and oil, while also possessing flame-retardant properties in environments with fire sources or high temperatures, reducing the risk of fire. In automotive repair, medical, and aviation settings, they prevent seat contamination and enhance fire safety. The average price of this product is approximately US\$320 per thousand units, with global sales of approximately 903 million units.

Upstream supply relies on polypropylene granules, PET fibers, flame retardants (phosphorus/nitrogen/halogen-free), and functional additives; downstream applications are concentrated in automotive repair, medical clinics, aviation transportation, and public places. Future trends include biodegradable flame-retardant materials, antibacterial functions, and smart label traceability, driving the product towards environmental protection, safety, and high added value.
