Abstracts

The global Flame Retardant Tris (1,3-Dichloro-2-Propyl) Phosphate market size is expected to reach \$ 1608.5 million by 2030, rising at a market growth of 3.6% CAGR during the forecast period (2024-2030).

TDCPP is an additive flame retardant, meaning that it is not chemically bonded to treated materials. Additive flame retardants are thought to be more likely to be released into the surrounding environment during the lifetime of the product than chemically bonded, or reactive, flame retardants.

Tris(1,3-dichloroisopropyl)phosphate (TDCPP) is a chlorinated organophosphate. Organophosphate chemicals have a wide variety of applications and are used as flame retardants, pesticides, plasticizers, and nerve gases. TDCPP is structurally similar to several other organophosphate flame retardants, such as tris(2-chloroethyl) phosphate (TCEP) and tris(chloropropyl)phosphate (TCPP). TDCPP and these other chlorinated organophosphate flame retardants are all sometimes referred to as "chlorinated tris".
