Abstracts

The global Flame Retardants market size is expected to reach \$ 17940 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Flame retardants are chemical substances that are added to materials to prevent or slow the spread of fire. They help reduce the flammability of various products, improving fire safety in a wide range of applications, including textiles, plastics, electronics, and building materials. These substances can be applied to materials in several formats, including chemical additives, surface coatings, and treated fibers.

As concerns regarding the toxicity and bioaccumulation of halogenated compounds rise, there is an increasing shift toward non-halogenated flame retardants. These include phosphorus-based and inorganic flame retardants, which are viewed as safer alternatives.

This report studies the global Flame Retardants production, demand, key manufacturers, and key regions.
