Flange connection diaphragm seal is a device used to connect and seal between two flanges. It consists of a diaphragm between two flanges and corresponding fasteners. Diaphragms are usually made of elastic materials such as rubber, polytetrafluoroethylene (PTFE), etc. It is flexible and chemically resistant, and can accommodate certain deformations and vibrations. The shape of the diaphragm is generally disc-shaped or corrugated to ensure effective sealing performance. The working principle of the flange connection diaphragm seal is to tightly connect the two flanges by fastening bolts, and the diaphragm is compressed and deformed to form a seal. When a certain amount of force is applied to the tightening bolts, the diaphragm forms a sealed barrier between the flanges, preventing the leakage of fluid or gas.
