## Abstracts

According to our (Global Info Research) latest study, the global Flange Planetary Gearbox market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Due to the shorter cylindrical output shaft, flanged planetary gearboxes have shorter flange shafts than conventionally constructed planetary gearboxes. The small flange planetary gearbox is equivalent to a typical planetary gearbox with a common output shaft. But it offers more flexibility because of its flange design, which makes connection easier and provides excellent force transmission.

An advantage for machinists of the flange output design is the large diameter, which allows for a higher torsional rigidity. In applications requiring high precision and fast motion cycles, such as power indexing tables or other components, flange planetary gearbox reducers benefit from this feature. Some flange planetary gearboxes can use pulleys to accommodate multiple belt types.

This report is a detailed and comprehensive analysis for global Flange Planetary Gearbox market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
