## Abstracts

According to our latest research, the global Flapping-wing Micro Drone market size will reach USD 244 million in 2031, growing at a CAGR of 27.9% over the analysis period.

Flapping-wing Micro Drone refers to a small-sized unmanned aerial vehicle that mimics the flight principle of birds or insects by using flapping wings to generate lift and thrust. It usually has a lightweight and compact body structure, with wings that can flap up and down. The wings are often made of flexible materials to achieve a more natural flapping motion. Some advanced models may also be equipped with small motors, gears, and linkages to precisely control the flapping frequency and amplitude of the wings.

A Flapping-wing Micro Drone generates lift through the flapping motion of the wings. When the wings flap downwards, they push the air downward, and according to Newton's third law, the air exerts an upward reaction force on the wings, thus providing lift. At the same time, by adjusting the angle and speed of the wing flaps, the drone can control the direction and thrust of flight, enabling it to achieve various flight maneuvers such as forward flight, hovering, turning, and ascending or descending. It has high maneuverability and can perform complex flight movements in a small space, making it suitable for tasks in confined environments. It can also achieve low-altitude flight and has a relatively quiet flight sound, which is beneficial for stealth and close-range observation. In addition, its unique flight mode inspired by nature has a high degree of interest and research value.

Flapping-wing Micro Drone has a wide range of applications in fields such as military reconnaissance, civilian photography, search and rescue, and environmental monitoring. In military applications, it can be used for low-altitude reconnaissance and

surveillance in complex terrains. In civilian use, it can be used for aerial photography in scenic spots, monitoring of agricultural fields, and search and rescue operations in disaster-stricken areas.
