The flash cooler sterilizer is an efficient sterilization equipment that combines the processes of heating, holding, and rapid cooling. It is capable of achieving rapid cooling during the process. The equipment consists of a direct steam injection heating section (which brings the product to the required temperature for sterilization), a holding tank (which ensures stable sterilization effect), and a flash evaporation tank (which is used for vacuum-assisted rapid cooling). The product is immediately cooled under vacuum, making it suitable for the sterilization of high-viscosity liquids.
