Flash etching solution, also known as rapid etching solution, is a chemical reagent used in the etching process. It is usually composed of sulfuric acid, hydrogen peroxide, etching additives, etc. Flash etching liquid is mainly used for the formation of fine lines, such as mSAP, SAP and other processes. Compared with traditional etching solutions, flash etching solutions have the advantages of fast etching speed, good quality of finished products, environmental protection, and high dissolved copper content. After etching, the board surface has no pinholes, low roughness, bright white copper surface, and no oxidation spots.
