The global Flash Flood Disaster Monitoring and Early Warning System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The flash flood disaster monitoring and early warning system is a system specially used to monitor, warn and manage flash flood disasters in mountainous areas. It includes data acquisition and monitoring equipment for real-time monitoring of parameters such as meteorological conditions, rainfall, geological conditions, water levels and soil moisture content, and then performs data analysis and prediction through a central control center. Once a potential flash flood risk is detected, the system triggers an alarm and sends an alert message to relevant authorities and the public, prompting emergency response measures.
