According to our (Global Info Research) latest study, the global Flash FPGA market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A field-programmable gate array is an integrated circuit designed to be configured by a customer or a designer after manufacturing –hence 'field-programmable'. The FPGA configuration is generally specified using a hardware description language, similar to that used for an application-specific integrated circuit. Circuit diagrams were previously used to specify the configuration, but this is increasingly rare due to the advent of electronic design automation tools.
