Flash image measuring instrument, also known as 'one-button optical measuring instrument' , is a precision instrument for rapid detection of two-dimensional dimensions.

Flash image measuring instrument is an image measuring instrument that obtains a complete image of the workpiece to be measured at one time and quickly completes the measurement. It uses advanced image measurement technology, combined with a telecentric lens with a large field of view, large depth of field, high numerical aperture and low distortion, to reduce the image contour of the measured object by several times or even dozens of times, and then digitizes it with a high-pixel CMOS camera. Subsequently, the background image drawing measurement software with powerful computing power will be programmed according to the built-in program to quickly capture the contours of the measured product and compare it with the camera's ruler to calculate the size of the product.
