Abstracts

A flat beamsplitter is a polarised optical component that can be used to separate the different polarisation components of incident light. When natural light is incident, the polarisation component (s-light), which is mostly perpendicular to the incident surface, is reflected and the polarisation component (p-light), which is mostly parallel to the incident surface, is transmitted due to the splitting film on the beamsplitter.

This report studies the global Flat Beamsplitter production, demand, key manufacturers, and key regions.
