According to our (Global Info Research) latest study, the global Flat Blade Shear market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The flat blade shear is a mechanical device used to cut sheet metal, and its blades are designed with a flat edge. In contrast to oblique-edged shears, the blades of flat-edged shears are perpendicular to the work surface.

Flat blade shears work by placing the sheet metal on a table and cutting it with a flat edged cutting blade that moves perpendicular to the table. The drop of the blade determines the location and shape of the cut. The flat blade shear can achieve high cutting precision, is equipped with safety devices, and is widely used.
