Abstracts

The global Flat Blade Shear market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Flat blade shears work by placing the sheet metal on a table and cutting it with a flat edged cutting blade that moves perpendicular to the table. The drop of the blade determines the location and shape of the cut. The flat blade shear can achieve high cutting precision, is equipped with safety devices, and is widely used.

The flat blade shear is a mechanical device used to cut sheet metal, and its blades are designed with a flat edge. In contrast to oblique-edged shears, the blades of flat-edged shears are perpendicular to the work surface.

This report studies the global Flat Blade Shear production, demand, key manufacturers, and key regions.
