Abstracts

The global Flat Inorganic Ceramic Membrane market size is expected to reach \$ 171 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

In 2025, the global production of flat inorganic ceramic membranes reached 2,704,200 square meters, with an average selling price of \$45 per square meter. The global annual production capacity of flat inorganic ceramic membranes is approximately 4 million square meters, and the gross profit margin is about 25.2%. Flat inorganic ceramic membranes are a type of membrane made from inorganic materials, characterised by typically existing in flat or sheet form, and are widely used in various separation, filtration, and catalytic processes. The upstream of flat inorganic ceramic membranes includes ceramic powders, membrane layer materials, and substrate materials, among others. The midstream consists of flat inorganic ceramic membrane manufacturers, while the downstream mainly covers applications in water treatment, wastewater separation, and the food industry.

Currently, the market for flat inorganic ceramic membranes is in a stage of steady growth, driven by their superior thermal stability, chemical corrosion resistance, and long service life, which have made them increasingly valuable in key separation applications such as industrial wastewater treatment, drinking water purification, and food and beverage processing. As environmental regulations continue to tighten and demand for high-efficiency separation technologies rises across various industries, the market penetration of this technology is steadily increasing. However, the industry still faces practical challenges, including heavy reliance on imports for high-end membrane materials, complex manufacturing processes, and the need for further improvements in membrane fouling control and regeneration cleaning technologies. Going forward, the

market will continue to evolve toward higher performance, lower costs, and greater system integration, with an increasingly mature competitive landscape.
