Abstracts

Pouches are made of flexible or easy-yielding materials; this helps to change the shape of these pouches easily based on the nature of the product being packaged. Pouches undergo a detailed conversion process such as printing, lamination, coating, and extrusion to develop different types of packaging products. A flat pouch is known as pillow pack, and it has various features such as zippers and slider closures. Flat pouches are gaining popularity in the market as they are lightweight; this helps reduce the transportation cost.

Scope of the Report:

This report focuses on the Flat Pouches in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In terms of revenue, the food segment dominates the flat pouches market. The ability of flat pouches to extend the shelf life of condensed milk powder, sugar, and coffee will lead to its increased preference during the forecast period. The increasing use of single-serve concept in the food and beverages packaging industry has enhanced the application of flat pouches. For instance, companies like Café Coffee Day are using sugar sachets and coffee sachets in flat pouches, which can be used as a unit dose. The growing focus towards the preservation of product freshness will boost the usage of flat pouches in the food sectors over the next few years. The APAC occupied around 32% of the overall market revenue and is anticipated to grow at a rapid growth rate in the coming years. Much of the region's growth comes from the rising population and the recent surge in consumption of beverages, which is boosting the demand for flexible packaging products, including flat pouches, especially

used for the packaging of milk powder and sugar. Also, several food manufacturing companies in the region prefer flexible packaging over rigid packaging because of its cost-effectiveness.

The worldwide market for Flat Pouches is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
