Flat roof is one of the common roof forms in modern buildings, and the choice of its materials plays a vital role in the performance and service life of the roof. Made of synthetic polymer materials, it has excellent aging resistance, chemical corrosion resistance, high tensile strength, and large elongation. It is suitable for buildings with high waterproofing requirements, such as large commercial buildings, hospitals, schools, etc. Asphalt waterproofing membrane is made of asphalt as the main raw material and is made by adding various additives and fillers. It has good waterproofing performance, corrosion resistance and durability. The price is relatively low and the construction is convenient. It is suitable for flat roof waterproofing projects of general civil buildings and industrial buildings. For example, it is widely used in some small residential buildings, factory buildings and other buildings.
