Flat Sachet Machine is an automatic packaging system specifically designed to produce flat, sealed pouches—commonly referred to as sachets—for single-dose or small-quantity products. These machines are capable of forming, filling, and sealing sachets in one continuous process, typically using heat-sealable laminated films. Flat sachet machines handle a wide variety of products including powders, granules, liquids, pastes, and wipes, and are widely used in the food & beverage, pharmaceutical, cosmetics, personal care, and chemical industries. They offer precision dosing, high production speeds, and compact footprints, making them ideal for high-efficiency production lines. The machines are classified into single-lane and multi-lane configurations, depending on output requirements, and may also vary based on sealing type (three-side seal, four-side seal, or twin sachets).
