Flat-top bifocals, also known as bifocals, are a special eyewear design that integrates two different optical zones on one lens: one for close-up vision, such as reading or writing; the other for long-distance vision, such as watching TV or driving. This design allows users to comfortably handle different distances without having to switch glasses frequently. Flat-top bifocals get their name from the transition design between the farsighted and nearsighted areas on the lens, which looks like a flat top shape.
