Flat wire oil-cooled motors are a high-efficiency motor technology that uses flat coil windings and an oil cooling system to achieve higher power density and better thermal management performance. The flat wire winding has a high fill factor, which can significantly improve the magnetic field strength and efficiency of the motor, while the oil cooling system effectively takes away the heat generated by the winding and stator by circulating cooling oil, ensuring that the motor operates under high load and high frequency conditions. Maintain a stable temperature.
