Abstracts

The global Flatbed Laminator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The main structure of the Flatbed Laminator includes a heating zone, a pressure zone and a cooling zone, which are continuously conveyed by two upper and lower heat-resistant and anti-stick conveyor belts, and the whole process of dry heat lamination (Hot Dry Lamination) is completed inside the equipment. The material of the Flatbed Laminator is usually a coil, and the width of the base material and the hot-melt adhesive film are the same. The laminated material can be cut. The coil composite process ensures the maximum area used by various substrates.
