## Abstracts

According to our (Global Info Research) latest study, the global Flatbed Laser Cutting Service market size was valued at US\$ 2248 million in 2025 and is forecast to a readjusted size of US\$ 3210 million by 2032 with a CAGR of 5.2% during review period.

Flatbed laser cutting services refer to industrial services provided by professional metal processing service providers, sheet metal manufacturers, metal service centers, or online on-demand manufacturing platforms. Based on customer drawings, 3D models, or 2D unfolded files, these services utilize flatbed 2D laser cutting equipment to precisely cut, drill holes, shape contours, and process blanks from metal sheets. This service typically processes steel plates, stainless steel plates, aluminum plates, copper plates, brass plates, and other thin or medium-thick metal plates. It utilizes fiber lasers, CO2 lasers, or other CNC laser cutting systems, combined with CAD/CAM programming, nesting, automated loading and unloading, auxiliary gas cutting, online quotation, and quality inspection to achieve high precision, small heat-affected zone, narrow kerf, complex pattern processing, and rapid delivery.

The market for flatbed laser cutting services is currently experiencing steady growth. This can be attributed to the increasing demand for precision cutting in various industries such as automotive, aerospace, electronics, and medical devices. The continuous development of laser cutting technology has led to improved cutting speeds, accuracy, and versatility. This has made flatbed laser cutting an attractive option for manufacturers looking for high-precision cutting solutions. With the rise of mass customization, manufacturers are increasingly seeking laser cutting services that can cater to their unique design requirements. Flatbed laser cutting allows for the efficient cutting of intricate designs and shapes, enabling manufacturers to offer customized

products to their customers.
