The global Flavin Adenine Dinucleotide market size is expected to reach \$ 107 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2024, global production of Flavin Adenine Dinucleotide was approximately 620 tons, with an average selling price of about US\$110 per kilogram. The scale of single-line production capacity varies depending on production processes and investment scale, with an average gross profit margin of approximately 15-25%. Flavin Adenine Dinucleotide is a coenzyme playing an important role in organisms; it is an active form of vitamin B2. Flavin Adenine Dinucleotide is composed of riboflavin (a vitamin B2 derivative), adenosine, and two phosphate groups. It is a redox cofactor, widely involved in various enzymatic reactions in cellular metabolism, transferring hydrogen and electrons during biological oxidation.

The upstream core raw materials for flavin adenine dinucleotide mainly include microbial fermentation media and precursors used to catalyze its synthesis; its downstream applications are primarily in the food and feed industry, the pharmaceutical industry, and life science research.
