According to our (Global Info Research) latest study, the global Flax Fiber for Textile market size was valued at US\$ 2091 million in 2025 and is forecast to a readjusted size of US\$ 3259 million by 2032 with a CAGR of 5.9% during review period.

In 2025, global production of Flax Fiber for Textile reached 393220 tons, with an average selling price of USD 5169 per ton, production capacity of approximately 462000 tons, and a gross margin of around 24.5%.

Flax Fiber for Textile refers to natural fiber materials derived from the bast of flax plant stems and processed through retting, degumming, scutching, carding, combing and other procedures for spinning, weaving, knitting and blended fabric production. It features good moisture absorption, breathability, relatively high strength, a crisp hand feel, natural antibacterial properties and biodegradability, and is mainly used in apparel fabrics, home textiles, decorative fabrics and certain high-end blended textile products.

The global Flax Fiber for Textile market shows a generally stable growth trend, with demand mainly driven by mid-to-high-end apparel, home textiles, eco-friendly fabrics and natural fiber blended textiles. Europe remains the core region for high-quality flax raw materials and long flax fiber supply, while China, India and several Asian countries play important roles in spinning, weaving and finished textile processing. With rising consumer preference for natural, breathable and sustainable textiles, flax fiber continues to expand its use in spring and summer apparel, home decoration fabrics and premium textile products. However, its output is still affected by planting area, climate conditions, raw flax quality and processing costs, resulting in relatively higher price volatility compared with cotton fibers and synthetic fibers.
