A flexible battery comprises a cell stack composed of multiple unit cells and an external casing for sealing the cell stack. Each of the multiple unit cells is composed of a positive electrode, a negative electrode, and an electrolyte layer positioned between the negative electrode and the positive electrode.

SCOPE OF THE REPORT:

This report focuses on the Flexible Batteries in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Flexible batteries are stretchable, bendable, and lightweight in nature and easy to use in intricate products with limited internal space. These batteries are widely used in wearable electronic devices such as smart glasses, smart watches, fitness bands, smart video/photo devices, and smart textiles, due to their characteristics. As the flexibility feature enables the battery to be folded, rolled, cut, and adapted to complement any shape of the product, the demand for flexible batteries is expected to increase in electronic applications in the near future. IoT devices are likely to require battery attributes such as re-chargeability with high-storage capacity and wireless connection to external power supplies in the near future.

The worldwide market for Flexible Batteries is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
