Abstracts

Flexible coaxial cable is designed to transmit radio frequency (RF) signals within a wide range of applications, from telecommunications to data and video signals, while offering the flexibility needed for installation in varied environments. Unlike semi-rigid coaxial cables, which are designed to hold their shape once bent, flexible coaxial cables can bend and flex during use without damaging the cable or significantly degrading signal quality. This makes them particularly useful in applications where the cable needs to navigate around corners or in spaces where rigid cables would be impractical.

According to our (Global Info Research) latest study, the global Flexible Coaxial Cable market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
