Flexible fiber sensors are sensors made of flexible materials that can maintain high sensitivity and accuracy under deformation conditions such as bending, stretching and torsion. Such sensors are usually embedded in textiles or other flexible substrates to monitor various physical parameters such as strain, pressure, temperature and biological signals, and are widely used in wearable devices, smart fabrics, medical monitoring and robotics.

Flexible fiber sensors have shown great potential in modern technologies and applications. They can not only adapt to complex and dynamic environments, but also fit closely with the human body and other flexible surfaces to achieve high-precision real-time monitoring. With the development of wearable devices, smart textiles and biomedical technologies, flexible fiber sensors will become a key component to promote innovation and progress in these fields, providing more intelligent and convenient solutions for health monitoring, motion analysis and human-computer interaction.
