Abstracts

The global Flexible Graphite Packing Ring market size is expected to reach \$ 357 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Flexible graphite packing rings are annular sealing components formed by compression-molding pure flexible graphite tape or braided packing. Characterized by excellent resistance to high temperatures, high pressures, and corrosion, as well as self-lubricating properties, they are widely used in the stuffing boxes of valves, pumps, and pipelines, serving as indispensable, high-efficiency sealing materials for both dynamic and static applications in industrial fluid equipment.

Upstream raw materials primarily include natural flake graphite, expanded graphite, flexible graphite foil, flexible graphite tape, graphite yarn, low-sulfur graphite materials, corrosion inhibitors, antioxidants, and lubricants, alongside reinforcement or anti-extrusion materials such as stainless steel wire mesh and nickel-chromium wire. Key material properties?such as carbon content, ash content, levels of sulfur, chlorine, fluorine, and metallic impurities, as well as the graphite expansion ratio and foil density?directly influence the packing ring's temperature resistance, compression and recovery characteristics, friction coefficient, corrosion resistance, and long-term sealing stability. The midstream sector comprises manufacturers of sealing materials and packing rings; key production stages include flexible graphite foil preparation, graphite tape cutting, winding, compression molding, density control, dimensional machining, end-ring assembly, incorporation of reinforcement structures, surface treatment, leakage testing, and final packaging.

In 2025, global sales volume is approximately 7,500 tons, the prevailing average ex-

factory price is around US\$32-38/kg, and the gross profit margin of major industry players ranges from approximately 25% to 42%.
