## Abstracts

The global Flexible and Printed Electronics market size is expected to reach \$ 5014.4 million by 2029, rising at a market growth of 10.7% CAGR during the forecast period (2023-2029).

The main thrust of the rapid growth of the global printed electronics market is the reduction of production costs and the expansion of demand for printed electronic products. Nowadays, the printed electronics industry has shown diversified development, and the market is still in its infancy. There is a huge demand for printed electronics in applications such as automotive electronics, energy, and the Internet of Things. Among them, flexible manufacturing technology has received the most attention.

Flexible electronics, also known as flex circuits, is a technology for assembling electronic circuits by mounting electronic devices on flexible plastic substrates. Printed electronics is a set of printing methods, which is used to create electrical devices on different substrates such as plastic, ceramic, and textiles. Printed electronics refers to the combination of conductive materials as well as varnish and ink systems, transferred in multiple layers to large areas of film, paper or other substrates at low cost. They perform functions of conventional electronics with special processing possibilities. The report counts printed electronic products manufactured by printing, excluding organic electronic and flexible electronic products.
