Abstracts

Flexible pipes are dynamic risers that are connected to subsea production equipment in topside facilities, which permit the flow of oil, gas, and water through them.

Scope of the Report:

This report focuses on the Flexible Pipes for Oil and Gas in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. High density polyethylene (HDPE) pipes will continue to dominate the flexible pipes market for oil and gas industry during the forecast period. HDPE pipes have the highest consumption in most oil and gas activities because they are strong, tough, flexible, and easy to install as compared to other types. They are corrosion-free and can be easily welded by butt fusion or electrofusion couplers to confirm a total leak proof network. The consumption of HDPE pipes will increase in the coming years due to the rising number of offshore contracts being given to drilling companies in search of more oil.

The offshore segment dominates the market. Flexibles pipes are widely used in offshore applications, such as chemical injection pipes and risers. These pipes help to explore and develop petroleum reserves that are located under a water body, such as river, sea, lake, or ocean. Offshore drilling and production activities are increasing owing to the increasing importance of deep and ultra-deep water activities in regions like Africa and Central and South America. The applications of flexible pipes in products, such as coiled tubing, umbilical pipes, and risers for offshore production activities are projected to drive the market in the oil and gas industry during the predicted period.

The worldwide market for Flexible Pipes for Oil and Gas is expected to grow at a CAGR

of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
