Abstracts

Flexible Printed Heaters are directly printed on polyester (PET), polyimide (PI), polycarbonate, etc. according to user requirements and specific operating parameters. Flexible printed heaters are based on positive temperature coefficient (PTC) materials that enable the heater to control its desired temperature or on fixed resistance heater designs that require a control circuit to control the temperature. The heater can be easily mounted using pressure-sensitive adhesive, field-applied adhesive, Velcro, etc., according to the requirement.It has advantages over conventional heaters such as being light weight, flexible to take place, providing uniform heat distribution, etc.

According to our (Global Info Research) latest study, the global Flexible Printed Heaters market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
