## Abstracts

The global Flexible Resin Coated Copper(FRCC) Foil market size is expected to reach \$ 84.95 million by 2032, rising at a market growth of 11.4% CAGR during the forecast period (2026-2032).

Flexible adhesive-backed copper foil (FRCC) is an electronic material formed by coating a layer of flexible insulating resin onto the surface of ultra-thin electrolytic copper foil and bonding it to a flexible substrate structure. It is an important component of flexible circuit board materials. Its structure typically consists of a thin conductive copper layer and a polyimide or modified resin adhesive layer, possessing both conductivity and flexible insulation properties. It maintains stable electrical performance even under bending conditions and is mainly used in flexible circuit boards, bendable electronic modules, and high-density interconnect structures. It is widely used in smartphones, wearable devices, medical electronics, and avionics. FRCC material forms a semi-cured structure by coating an ultra-thin copper foil with a resin adhesive layer, allowing it to replace the traditional copper foil and adhesive film combination in multilayer flexible circuit board manufacturing, thereby reducing circuit board thickness and improving structural stability. In 2025, global sales of flexible adhesive-backed copper foil were approximately 5.6 million square meters, with an average unit price of approximately US\$6.8 per square meter, and an overall industry capacity utilization rate of approximately 71%. The upstream of the industry chain mainly consists of electrolytic copper foil manufacturers, polyimide resin and epoxy resin material manufacturers, functional additive manufacturers, and precision coating equipment manufacturers. The midstream is FRCC material manufacturers, and the downstream companies belong to the fields of flexible circuit board manufacturing, consumer electronics terminal manufacturing, automotive electronic system manufacturing, medical electronic equipment manufacturing, and aerospace electronic equipment manufacturing. The

industry's average gross profit margin is approximately 29%. The product cost structure mainly consists of ultra-thin copper foil raw materials accounting for approximately 52%, high-performance resins and adhesive materials accounting for approximately 20%, production and energy costs accounting for approximately 12%, equipment depreciation and maintenance accounting for approximately 7%, R&D testing and quality control accounting for approximately 5%, and packaging, logistics, and management costs accounting for approximately 4%. On the demand side, the downstream demand list mainly includes flexible motherboards for smartphones, circuit boards for wearable devices, flexible circuit boards for camera modules, circuit boards for foldable screen devices, flexible circuit boards for medical electronics, flexible circuit systems for aerospace electronics, and sensor module circuit boards for automotive electronics. The downstream customer list mainly includes flexible circuit board manufacturers, smartphone manufacturers, wearable device manufacturers, medical electronic equipment manufacturers, automotive electronics suppliers, and aerospace electronic equipment manufacturers. In terms of business opportunities, policy-driven factors are reflected in various countries promoting the upgrading of the semiconductor and electronic materials industry chain and strengthening the localization of high-end electronic materials; technology innovation-driven factors are reflected in the continuous breakthroughs in ultra-thin copper foil processing technology, high heat-resistant flexible resin systems, and high-precision coating processes, enabling FRCC materials to meet the design requirements of higher density and higher frequency circuits; changes in consumer demand are reflected in the rapid development of foldable screen devices, wearable devices, and lightweight electronic products, which have led to a continuous increase in demand for flexible circuits and bendable electronic materials, thereby driving the steady expansion of the FRCC market.
