## **Abstracts**

Flexible shaft couplings are used in applications that require high torque transmission in the oil and gas industry. Non-lubricated coupling types, such as diaphragm, elastomeric, bellow, and disc couplings, are mostly adopted in the oil and gas industry. Flexible shaft couplings provide a combined torque capacity with vibration damping in pump applications in pipelines and oil refineries. This type of flexible shaft coupling can withstand extreme temperatures, pressure, and humidity. As a result, the probability of damages in the equipment is very less, reducing the overall machine life cycle cost.

### **Scope of the Report:**

This report focuses on the Flexible Shaft Couplings in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The oil and gas industry accounted for the major share of the flexible coupling market. Flexible shaft couplings are extensively used in the oil and gas industry for generating high torque transmission. These flexible shaft couplings can endure extreme temperatures, pressure, and humidity and can provide combined torque capacity with vibration damping in pump applications in pipelines and oil refineries.

This market study estimates that in terms of geographic regions, EMEA will be the major revenue contributor to the flexible shaft couplings market throughout the forecast period. The growing investments in renewable power generation plants will be a major factor fueling the adoption of flexible shaft couplings in this region during the forecast period.
