Abstracts

Flexible Solar Panel is a kind of thin film solar cell. Flexible solar panels can, as their name suggests, flex. They are also very lightweight and these two characteristics make them useful for camping, rapid transport and deployment in emergencies, and for use on caravans, vehicles, and even airplanes. On buildings they can be applied to curved surfaces or structures where weight is an issue. As they can be glued directly to the surface, existing penetrations don't need to be used or new penetrations made.

According to our (Global Info Research) latest study, the global Flexible Solar Panel market size was valued at US\$ 542 million in 2023 and is forecast to a readjusted size of USD 964 million by 2030 with a CAGR of 8.7% during review period.

Global Flexible Solar Panel key players include Uni-Solar, MiaSol?, Global Solar, SoloPower Systems, etc. Global top four manufacturers hold a share nearly 70%.

United States is the largest market, with a share about 80%, followed by Europe, and Japan, both have a share about 15 percent.

In terms of product, Copper Indium Gallium Selenide (CIGS) is the largest segment, with a share over 55%. And in terms of application, the largest application is Commercial, followed by Mobile, Residential, etc.
