Abstracts

The global Flexible Stripwound Metal Hose market size is expected to reach \$ 1041 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

In 2025, global Flexible Stripwound Metal Hose production reached approximately 254,700 k meters with an average global market price of around US\$ 3.2 per meter, and a gross profit margin of approximately 10%-30%. Flexible Stripwound Metal Hose is a flexible conduit made by helically winding and interlocking metal strip into a continuous tube. The interlocked profile enables bending with good crush resistance and tolerance to vibration, while optional liners or seals can improve leakage performance for air, fumes, or light media transfer. Compared with fully welded corrugated metal hoses, stripwound designs are often favored for ventilation, exhaust handling, and protective conduit use due to robust mechanics, wide diameter options, and cost efficiency. They are commonly applied in industrial ducting, equipment connections, and mobile exhaust routing where flexibility and durability are required. The industrial chain of Flexible Stripwound Metal Hose includes upstream metal strip materials, slitting and edge conditioning, forming rolls, interlocking profiles, optional liners, end fittings, clamps, protective covers, and inspection tools. The midstream covers strip forming and winding, interlock shaping, optional sealing or lining insertion, fitting assembly, dimensional calibration, leakage checks, vibration and bend-cycle tests, and packaging. Downstream applications include industrial ventilation and exhaust, dust collection, mobile equipment exhaust routing, cable and hose protection, marine and rail systems, and general machinery connections. Supporting services include selection guidance, on-site measurement, installation support, and replacement.
