A flexitank for edible oil transportation is a flexible, large-capacity container specifically designed for the transportation of edible oil. It is typically made from multiple layers of high-strength, food-grade materials such as polypropylene, polyethylene, and other specialized polymers. These layers are carefully constructed to provide durability, prevent leakage, and ensure the integrity of the edible oil during transit. The flexitank is usually installed inside a standard shipping container, which serves as a protective outer shell. This setup allows for efficient use of space and easy handling during loading, unloading, and transportation via trucks, trains, or ships. The flexitank can hold a substantial volume of edible oil, ranging from several thousand to tens of thousands of liters, making it an economical and practical solution for bulk transportation. It is equipped with appropriate valves and fittings for filling and emptying the oil, and its design adheres to strict safety and hygiene standards to safeguard the quality of the edible oil being transported.
