The global Flexographic Printing Plate market size is expected to reach \$ 1841.2 million by 2029, rising at a market growth of 4.6% CAGR during the forecast period (2023-2029).

Global key players of Flexographic Printing Plate include DuPont and Flint, etc. The top two players hold a share over 60%. Americas is the largest market, has a share about 34%. In terms of product type, Digital Flexographic Plates is the largest segment, occupied for a share of about 80%, and in terms of application, Flexible Packaging has a share about 32 percent.

Flexographic printing plate is flexible Digital Flexographic Plates, used in flexo printing to transfer ink & images to a flexible substrate, such as paper or film.

Flexographic printing plates are flexible photopolymer plates, used in flexo printing to transfer ink & images to a flexible substrate, such as paper or film. The printing plates are a critical element of the flexographic printing process and the quality of the printed image is largely dependant on the quality of the flexo plates used.

The flexo process itself is well known for adapting to print onto all types of flexible substrates and the plates can be used & re-used over millions of impressions.

The plate surface is the only area that comes into contact with the substrate after the ink is applied to the plate. The etched or relieved areas do not contact the ink. Originally, flexo plates were made from rubber, but are today made from photopolymer material in sheet form – which differentiates them from the fixed metallic printing plates of offset printing. The plates are flexible enough to be wrapped around cylindrical print/plate

rollers.
